- How to divide a string into various elements?

  - string_divide()

  - substring()

  - split()

  - str()

- Which type of scope is only accessible by subclass?

  - static

  - public

  - protected

  - None of the above

- How can we inherit properties in PHP?

  - implements

  - extends

  - include

  - None

- Which of the following function provides a convenient way to move uploaded file from a temporary location?

  - is_uploaded_file()

  - move_uploaded()

  - move_uploaded_file()

  - none

- Which are the fundamental concept of OOP?

- inheritance

- polymorphism

- encapsulation

- All of the above

- Which of the following statement is used for pulling each key/value pair from the array until all items are retrieved

  - for statement

  - foreach statement

  - do-while loop

  - None of above

- Which of the following function is used to merge arrays

  - array_combine()

  - array_marge()

  - array_slice()

  - None

- How to determine the length of a string?

  - strlen($str)

  - strLength($str)

  - None of the above

- Which of the following exception type should…..

  - InvalidArgumentExeption

  - Logic Exception

- OutOfBoundsExceptions
- RuntimeException

- In order to know the data type of ……
  - getVar()
  - gettype()
  - getType()
  - getDataType()

- Which function in PHP sends mail?
  - mail()
  - mailto()
  - None of them

- $value = 1;

  do{

  $count = 3;

  $value = $value+2

  $value = $count*$value;

  } while ($count >= 12);

  echo "value = $value";

  Which of the following is correct?
  - Line 6 will show an error
  - Line 8 will show an error
  - The output is 12

- The output is 9

- Which keyword allows class members (methods and properties) to be used without needing to instantiate a new instance of the class?
  - protected
  - final
  - static
  - private

- Which of the following allows you to use domain names in place of the corresponding IP Address?
  - HTTP
  - DNA
  - DNS
  - FTP

- Encoded session data can be decoded. Which function offers a particularly convenient method for manually decode all session variables?
  - session_unset()
  - session_destroy()
  - session_decoding()
  - session_decode()

- An exception is handled by
  - The throw keyword
  - The catch block
  - The function that caused the error

- An object of the exception class

- Which type of directive detect error?

  - log_errors

  - error_log

  - log_error_max

  - None of the above

- Which of the following function removes the specified directory?

  - removedir()

  - deletedir()

  - rmdir()

  - touch()

- Which of the following are correct scope types of PHP variable? (Choose two)

  - Local variable

  - Global variable

  - Static variable

  - All of the above

- Which statement is true about Regular Expressions?

  - Describing or matching data according to defined syntax rules

  - Allowing to slice and dice text in nearly every conceivable fashion

  - Used for searching data

- Php

Echo $_SERVER['REMOTE_ADDR'];

The above statement represents what?

- Shows the IP address of the local system

- Shows the IP address of the client/visitor

- Shows the IP address of the webserver

- None of the above

- In PHP, which of the following function is used to insert php script into another script

  - include[]

  - $include()

  - include()

  - $include{}

- Which function executes a case-sensitive search of a string ….

  - eregi()

  - ereg()

  - pereg()

  - peregI()

- What is the advantage of Prepared Statement?

  - Supports for replication

  - Eliminate overhead

  - Enhanced debugging

- How to can we store information on the client's Machine …

  - Use session

  - Use cookies

  - Use session variables

  - None of them

- Which type of scope is only accessible by subclass ….

  - static

  - public

  - protected

  - None of the above

- Which keyword is used to refer to properties or methods?

  - private

  - protected

  - public

  - $this

- Which of the following term originates from the Gree……

  - Abstraction

  - Differential

  - Inheritance

  - Polymorphism

- Which of the following function will delete all session variables stored in the current session but not completely remove from storage mechanism?

- **session_unset()**

- session_destroy()

- session_none()

- session_fresh

- There is a PHP class called MyPhp; and it has a function getData() . An instance created from the class called $callPhp. How to call getData() function?

  - **$callPhp->getData();**

  - $callPhp.getData();

  - $callPhp<-getData();

  - $callPhp(getData());

- How to remove last element of an array?

  - array_shift()

  - array_unshift

  - array_push()

  - **array_pop()**

- The practice of creating objects based on predefined class is often referred to as.

  - Class creation

  - Object instantiation

  - Object creation

  - **Class instantiation**

- How to divide a string into various elements?

  - string_divide()

- substring()

- split()

- str()

- Which of the following statement is correct?

  - A static variable does not lose its value when the function execute…..

  - A static variable lose its value when the function exists.

  - None

- What is the principal purpose of PEAR?

  - And officially sanctioned library of open source component contributed by PHP architects

  - And officially sanctioned library of documentation standard contributed by PHP architects

  - And officially sanctioned library of web services product contributed by PHP architects

  - All of the above

- What do you mean by Sanitizing input?

  - How to perform file system

  - How to interact with data files

  - How to prevent users from passing data that may cause harm to data

  - None

- What are the two common characteristics shared by all objects?

  - Methods and interfaces

  - State and behavior

- Methods and messages

- Which of the following function checks for the existence of DNS records?

  - checkdns()

  - checkdnsr()

  - checkdnsrr()

  - checkdnsa()

- What are the difference between print and echo? (choose two)

  - echo faster than print

  - echo return value

  - print return value

  - echo return true

- The methods declared only within a parent class but are implemented in the child classes is called?

  - final method

  - interface

  - abstract method

  - public method

- The practice of separating the user from the true inner workings of an application through well-known interfaces is known as

  - Polymorphism

  - Abstraction

  - Inheritance

  - Encapsulation

- Which function create a new session of continues a current session?
  - SessionStart
  - session_Start
  - Start_session
  - All of them

- Which types of function is called by itself?
  - Nesting function
  - Recursive function
  - Variable function
  - All

- Which of the following function sorts array items in descending order?
  - asort
  - sort
  - rsort
  - ksort

- Which of the following property is used to initialize object properties?
  - method
  - variable
  - constructor
  - destructor
  - instanceof

- We can declare constant the by using following function _____

  - declare()

  - include()

  - require()

  - define()

- PHP does not support which of the following OOP properties?

  - Object cloning

  - Multiple inheritance

  - Interface

  - Namespace

- How can we use unique identifier:

  session_id
